

# Releasing Ladybugs

1. Water your garden before releasing the ladybugs
2. Release the ladybugs after sundown since ladybugs do not fly at night. If released during the day they will immediately fly away
3. Shake them out of the cup in groups at the base of the plants that have aphids. Ladybugs always crawl up
4. Release 1/3 of them the first night, another 1/3 two nights later, the rest in two nights after that. Store the remainder in the refrigerator
